

METHODS, SYSTEMS AND ARTICLES FOR ORDERING A  
TELECOMMUNICATION SERVICE

Abstract of the Disclosure

5

A first method comprises initiating a telecommunication network trigger based upon a service code dialed from an originating party. The service code includes an alphabetical abbreviation for a name of a telecommunication service. In dependence upon the trigger, a step of provisioning the telecommunication service for the originating party is performed. A second method comprises initiating a telecommunication network trigger based upon a code including "\*M" or "#M". In response to the trigger, a step of providing a menu of a plurality of telecommunication options in is performed. Systems and articles associated with the first and second methods are disclosed.
